

HAPPY HALLOWEEN

FROM THE BLUE PLAID SOCIETY

We hope you have a fun and safe Halloween. We want you to be aware of a substance called "Fentanyl", a deadly chemical found in all street drugs, and is now being made to look like candy.

Please see the back of this card for more information and share this with your parents.

WHAT IS FENTANYL?

A deadly chemical that is being pressed into fake pills and cut into other street drugs to drive addiction. It only takes a very small amount, 2 milligrams, to be lethal.

WHAT ARE FAKE PILLS?

Criminal drug dealers are making fentanyl and pressing it into fake pills made to look like prescription medication. These fake pills contain no real medicine.

New fake pills have recently emerged called "Rainbow Fentanyl" that are made to look like candy to lure youth into drug use.

ONE PILL CAN KILL

Never take any pill that was not prescribed to you by a doctor. Pills purchased on social media are not safe.

Never use, or start using, any street drug for any reason. Get help! Talk to your parents!

In loving memory of Tristan Welsh
